**Examiner's Detailed Office Action**

1. Claims 1-36 are allowed.

**Drawing Objection(s)**

2. Regarding Fig. 1 - Fig. 4, respectively. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

**REASONS FOR ALLOWANCE**

3. The following is an Examiner's statement for reasons for allowance:
4. The closest art *Kadokura, Hidekimi* (USPN 5,929,267), *Umeda et al.* (USPN 5,467,355), *Yesildirek et al.* (USPN 5,943,660), *Keeler et al.* (USPN 5,729,661), *Keeler et al.* (USPN 5,479,573), *Kaji et al.* (USPN 6,895,286), *Marko et al.* (USPN 5,041,976), *McCrown et al.* (USPN 5,067,099) and *Wood, Graeme G.* (USPN 6,424,930) does not teach or render obvious

applicant's claimed invention. In particular, as pointed out below, the art lacks certain features and the combination as specified in the respective claims.

5. With regards to claim 1 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving from said radial basis function neural network a formula for virtual age of a device of said given type, and applying said formula to said significant parameters from a further device of the said given type for deriving wear increments for said further device.

6. With regards to claim 4 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving incremental wear data for a further device, similar to said sample devices, by utilizing device data for said further device in conjunction with said coefficients of said radial basis function neural network determined in the preceding step.

7. With regards to claim 10 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving an equation for increments of virtual age for each device in said training set, said virtual ages being normalized substantially to a desired standard value, and applying said equation to said selected wear parameters of a further device similar to devices in said training set for computing wear increments for said further device.

8. With regards to claim 16 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving from said radial basis function neural network a formula for virtual age of a

device of said given type, and means for applying said formula to said significant parameters from a further device of the said given type for deriving wear increments for said further device.

9. With regards to claim 17 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving respective wear increments corresponding to said scalars. Modeling said wear increments by a radial basis function neural network with M hidden units, wherein M is a free parameter, resulting in a linear system of equations, Determining M coefficients in a supervised training phase involving N histories of devices which failed. Computing for each device the M independent sums over all wear increments, thereby obtaining an (NxM) matrix and N equations for the virtual age of each device, and computing from said (NxM) matrix and N equations a virtual age for each device.

10. With regards to claim 20 *Kadokura, Hidekimi, Umeda et al., Yesildirek et al., Keeler et al., Keeler et al., Kaji et al., Marko et al., McCrown et al., and Wood, Graeme G.*, does not disclose deriving respective wear increments corresponding to said scalars. Modeling said wear increments by a Gaussian basis function neural network with M hidden units, wherein M is a free parameter, resulting in a linear system of equations; determining M coefficients in a supervised training phase involving N histories of devices which failed; computing for each device the M independent sums over all wear increments, thereby obtaining an (NxM) matrix and N equations for the virtual age of each device; and computing from said (NxM) matrix and N equations a virtual age for each device.
